Discover the
Tru-Difference.

Tru-D is changing the way health care works by providing hospitals with leading-edge technology for enhanced disinfection of health care environments using a comprehensive, programmatic approach.
Tru-D®

A PDI SOLUTION

A smart approach to disinfection: Team Tru-D helps guide you to success.

The **Tru-D** SmartUVC team provides a comprehensive, programmatic approach to education and adoption of the **Tru-D** device. Together with our Program Management, Clinical Affairs, Regional Sales Managers and Communications Team, we help identify your goals, prioritize use of the **Tru-D** device and define success.

A **CONSISTENT** MESSAGE IS KEY:

- Identify a **Tru-D** champion within your facility

- Encourage a multidisciplinary approach with your team

- Build a communications plan together with **Tru-D** SmartUVC and internal and external partners

# Training and implementation: Build a culture of UVC within your facility.

Tru-D SmartUVC provides extensive training for operators and stakeholders including both classroom and hands-on training. We help your team through logistics of implementation with bed tracking and workflow as well as teach how to operate the device **safely and educate staff on important safety protocols.** By developing standard operating procedures, your team will feel empowered and take ownership of your UVC disinfection program.

Tru-D device **network topology**.

- **Tru-D** SmartUVC provides a remote with cellular connection enabled.

- Device utilization data is collected and managed by **Tru-D** SmartUVC.

- User can view **Tru-D** device utilization statistics via web browser at mytru-d.com
THE TRU-D PORTAL

Tracking your Tru-D device.

The **Tru-D** device delivers your disinfection data automatically to your secure **Tru-D** portal. Its intuitive controller allows for the ultimate in ease of use and real-time documentation of your disinfection process.

The **Tru-D** portal provides visual data, showing hospital staff that a room has been properly disinfected. **Tru-D** technology takes the guesswork out of UVC room disinfection more than ever before.

- **Customized, automated reports**

- **Documentation of Tru-D device usage**

- **Weekly, monthly and quarterly reporting**

- **Joint review calls to compare usage and compliance goals**

Customer **support and service** at your fingertips.

Tru-D SmartUVC provides technical support across the country as well as continuous training and educational opportunities. Our support hotline is available 24/7 should you have an issue with your **Tru-D** device. Your investment in a **Tru-D** UVC disinfection system also includes a one-year Service Agreement:

- **Tru-D** Web Portal password-protected access to your usage analytics and permanent archive of your data

- Access to our Outbreak Loaner Pool

- Dedicated service 24 hours/7 days per week—**Tru-D** technicians are available via telephone and email

- Comprehensive warranty scope for defect or workmanship

- Within 24 hours of notification of service issue you will receive a response and resolution plan

- Within 48 hours, device will be "back in service" with onsite repair or if device requires factory service, a loaner unit will be onsite within 72 hours

- Remote controller and Door Monitor back up clone onsite in 24 hours

- Hospital site visit annually for preventative maintenance, sensor calibration, and device tune up

- Complete Bulb Protection Plan and Replacement bulbs

- **Tru-D** App upgrades as released

- Continuous training and education opportunities
Tru-D: The robot **with a brain.**

Measured, reflected dose ensures thorough room disinfection

Optimizes workflow and reduces the threat of human error in the disinfection process

Requires only one placement and one cycle in a room

Technology is validated by more than 10 independent, third-party studies

Ensures significant microorganism reduction in direct and shadowed areas

Tru-D
SmartUVC

What does a **smart layered approach** look like?

1

Establishing standardized, evidence-based policies and protocols.

2

Choosing appropriate disinfection products.

3

No-touch, whole room disinfection.

4

Staff education.

5

Compliance monitoring and feedback.
